

Instant Stain Remover

Ecoegg Instant Stain Remover quickly removes food and drink stains from clothing and other fabrics.

It is incredibly powerful at removing even the toughest of stains with ease.

Directions for use:

Always do a colourfast test.

For clothing and linens

1. Remove excess liquid from stained area.
2. Slightly dampen area with cold water.
3. Spray, rub in if needed.
4. Rinse well with water.
5. For stubborn stains, repeat if necessary.
6. Launder as usual.

For carpets and upholstery

1. Remove excess liquid from stained area.
2. Slightly dampen area with cold water.
3. Spray, rub in if needed.
4. Use a carpet cleaning vacuum (or a sponge and water) to remove all soapy residue.

No Peroxide. No Chlorine Bleach. No Phosphates.

Contains amongst others:

5-15% Non-ionic surfactants

Caution: Causes serious eye irritation.

If in eyes: Rinse cautiously with water for several minutes.

Remove contact lenses, if present and possible to do so.

If eye irritation persists, seek medical advice/attention.

Keep out of reach of children.

Frequently Asked Questions

Is it safe on my Fabrics?

Stains are a pain but you certainly don't want the removal to be worse than the problem. The good news is that our formula does not contain harsh oxidising agents such as peroxide or chlorine bleach, and is generally safe on all washable fabrics EXCEPT rayon and acetate (which hate getting wet anyway).

To be safe, you should check any labels and if you read "wash separately", "wash in cold water", "hand wash", "do not use detergent" or "turn inside out to launder" it may indicate that the dyes in these items are not colourfast.

If you are under any doubt then you can carry out a colourfast test.

What is a Colourfast test?

To test if our formula is safe for your fabric, you can choose an inconspicuous corner of the material (maybe a hem or other hidden area) and give it a few sprays.

Leave for two to three minutes and then blot with a white paper towel. If the colours do not change, run or come off on the paper towel; and if the item is definitely washable, you may safely use the Stain Remover.

Is it safe on Upholstery and Carpets?

Yes, our formula works excellently on heavier fabrics and will quickly get rid of stains. However, after treatment, it is important to properly remove all soapy residues. We suggest a carpet cleaning vacuum or careful use of a sponge and rinse with water.

Failure to properly remove residue can result in the clean spot collecting dust over time. If residue does remain and this occurs you can still use a vacuum or sponge to clean it away.

Is there anything it's not recommended for?

Despite being safe for most clothing and your hands, there are still some things that you need to be careful with:

- Clothing made with rayon, acetate or silk and listed as "Dry Clean" is not recommended.
- Surfaces that are porous like marble, granite or wood and that need special care, may absorb the liquid and dull the surface.

Why does it not work on "this" stain?

Our formula is very powerful and removes a wide variety of stains. However, there are some stains on some fabrics that seem to be harder to remove than others. Following the Instructions (absorb excess/moisten with water/treat area/ allow some time/laundry as usual) can be repeated and significant progress should be made.

As there are so many things to consider with a stain – such as how long it's been there, what it is, has it been previously treated, what the fabric is, etc. etc.- it's impossible for any stain remover to remove every stain.

What types of stains does it work on best?

It is effective on a wide variety of stains, but here are some that it works particularly well on:

Wine

Blot wet stain of excess liquid or moisten dry/old stains with water, spray and then launder as usual or rinse away soapy residue.

Berries, Pomegranate Juice and Tomatoes

Like wine, these disappear on contact.

Remove excess material, moisten with water, spray and then launder as usual.

Blood, Grass, Lipstick and Mascara

These also quickly disappear; although they need a little rubbing. Remove excess material, moisten with water, spray then use some rubbing to lift the stain and dissolve the colour-causing particles. Again, launder as usual.

Carbon, Tea and Grape Juice

These types of stains do come out, but not on contact. Remove excess material, moisten with water, spray and then launder for a great post-wash result.
